

WIRELESS, REDEFINED

Airship Direct

At REL, wireless isn't an afterthought. It's a performance tool. Airship Direct represents our cleanest expression of wireless freedom yet, zero-compression, ultra-low latency transmission without the clutter of extra cables or power supplies. Just effortless setup and uncompromised sound.

The Evolution of Wireless

Our original Airship II remains one of the finest wireless platforms in the world, delivering full-range, reference-quality sound with astonishing speed and clarity. But it required RCA cables, a separate power supply, and a receiver box. Functional, yes—but not as elegant as it could be.

What Makes Airship Direct Different

With Airship Direct, we've reimaged the receiver. It now plugs directly into a dedicated port on the amplifier panel of the new Serie S. The result:

- No RCA interconnects
- No receiver power cords or wall warts
- No black box to hide

It's plug-and-play wireless that gets you from box to bass in minutes.

Performance, Untouched

Airship Direct delivers identical performance to Airship II. You'll enjoy the same ultra-wide bandwidth and ultra-low latency, ensuring REL's legendary speed and musicality are preserved. Wireless that feels invisible—because you hear the music, not the system.

Seamless with Serie S

Airship Direct launches alongside the new Serie S subwoofers: 212 Black Label, Carbon Special Black Label, S/850, and S/550. Each model is equipped with the dedicated input for direct connection. For advanced systems, stereo pairs, or full Line Arrays, Airship Direct scales effortlessly, with one transmitter serving multiple receivers.

Who It's For

For those who demand great sound without the tangle of wires, Airship Direct is the solution. Whether you're upgrading your living room system or installing a reference-grade Line Array, Airship Direct makes wireless simple, elegant, and uncompromising.

Tailored For:

- Direct-connect wireless for current Serie S subwoofers
- Zero-compression, ultra-low latency
- Eliminates RCA cables, power supplies, and receiver boxes
- Effortless plug-and-play setup
